

tail ratio approx. for $\text{pstable}(\alpha = 1, \beta = 0.5)$

$$\varepsilon(x) = (\bar{F}(x, \cdot) - \bar{F}_P(x, \cdot)) / \bar{F}_P(x, \cdot)$$

tail ratio approx. for $\text{pstable}(\alpha = 1.1, \beta = 0.25)$

$$\varepsilon(x) = (\bar{F}(x, \cdot) - \bar{F}_P(x, \cdot)) / \bar{F}_P(x, \cdot)$$

tail ratio approx. for $\text{pstable}(\alpha = 0.99, \beta = 0.992)$

$$\varepsilon(x) = (\bar{F}(x, \cdot) - \bar{F}_P(x, \cdot)) / \bar{F}_P(x, \cdot)$$

tail ratio approx. for $\text{pstable}(\alpha = 1.2, \beta = 0.5)$

$$\varepsilon(x) = (\bar{F}(x, \cdot) - \bar{F}_P(x, \cdot)) / \bar{F}_P(x, \cdot)$$

tail ratio approx. for $\text{pstable}(\alpha = 0.7, \beta = 0.9)$

$$\varepsilon(x) = (\bar{F}(x, \cdot) - \bar{F}_P(x, \cdot)) / \bar{F}_P(x, \cdot)$$

tail ratio approx. for $\text{pstable}(\alpha = 1.7, \beta = 0.6)$

$$\varepsilon(x) = (\bar{F}(x, \cdot) - \bar{F}_P(x, \cdot)) / \bar{F}_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.01, \beta = 0.8)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.05, \beta = 0.4)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.1, \beta = 0.4)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.2, \beta = 0.5)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.3, \beta = 0.6)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.4, \beta = 0.7)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.5, \beta = 0.8)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.5, \beta = 0.8)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.5, \beta = 0.8)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.5, \beta = 0.8)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.6, \beta = 0.9)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.7, \beta = 0.1)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

tail ratio approx. for $\text{dstable}(\alpha = 1.8, \beta = 0.2)$

$$\varepsilon(x) = (f(x, \cdot) - f_P(x, \cdot)) / f_P(x, \cdot)$$

$\text{dstable}(x, \alpha = 0.999, \beta = 0.1, \log = T)$

$\text{dstable}(x, \alpha = 0.999, \beta = 0.9, \log = T)$
